Response to RFI-2026-014 — AeroSight 400 Sensor Pod

Submitted 21 August 2026 · POC: proposals@acmeaero.example

Executive Summary

Acme Aerospace is pleased to submit the AeroSight 400, a flight-proven multi-spectral sensor pod in low-rate production. The AeroSight 400 was developed from inception around open standards and has completed flight demonstrations on two Group 5 platforms.

Open Architecture (Ref. 3.1)

The AeroSight 400 architecture fully implements SOSA Technical Standard 2.0 aligned interfaces, and the mission computer hosts OMS/UCI compliant message services. Acme assesses the solution as fully MOSA compliant and has completed third-party conformance assessment of the SOSA plug-in cards.

Physical Characteristics (Ref. 3.2)

Total delivered mass is 38.5 kg including mounting hardware and the standard 14-inch lug interface. A lightweight configuration deleting the laser designator is available at 34.1 kg.

Technical Maturity (Ref. 3.3)

The AeroSight 400 completed a 22-sortie flight demonstration campaign in a relevant environment in 2025, supporting an assessed Technology Readiness Level of TRL 7. A production-representative unit is scheduled for operational test in early 2027.

Export Control (Ref. 3.4)

Export of the EO/IR sensor assembly is controlled under ITAR, USML Category XI(a). All other pod subsystems are EAR-controlled under ECCN 7A611. Acme maintains a registered ITAR compliance program.

Schedule (Ref. 3.5)

Acme will deliver a first article within 14 months of contract award, supported by our existing supply base and active production line.

Environmental and Reliability (Ref. 3.6, 3.7)

The pod operates across -40 C to +71 C ambient. Demonstrated MTBF from the flight campaign and accelerated life testing is 5,000 hours.

Corporate Experience

Acme Aerospace has delivered over 300 sensor systems across four programs of record during the past decade. Our Cedar Rapids facility is AS9100D certified. The information contained herein is provided for planning purposes only. Nothing in this document shall be construed as a commitment by the Government to issue a solicitation or award a contract.
