RFI-2026-014 Response — NorthStar Pod, Block 1

Commercial in Confidence · 26 August 2026

Introduction

Boreal Systems offers the NorthStar Pod Block 1, an adaptable sensor solution derived from our maritime patrol product line. Boreal welcomes the opportunity to discuss tailoring options with the Program Office.

Response to Item 3.1 — Open Architecture

The NorthStar processing backplane and power interfaces align with SOSA guidance; however, the sensor data bus in Block 1 remains proprietary. Full MOSA alignment, including OMS/UCI messaging, is roadmapped for Block 2, currently in preliminary design. Boreal therefore characterizes Block 1 as partially compliant with MOSA standards.

Response to Item 3.2 — Weight

System weight in the threshold configuration is 41.2 kg. Weight reduction initiatives targeting the environmental control unit are under study.

Response to Item 3.4 — Export Control

No export restrictions apply to the NorthStar baseline configuration, which contains no US-origin ITAR-controlled content. Certain optional sensor payloads may introduce national export licensing requirements that would be identified at the configuration stage.

Response to Item 3.5 — Schedule

Boreal will deliver a first article 11 months from contract award, contingent on timely availability of Government-furnished equipment for integration testing.

Response to Item 3.6 — Environmental

The NorthStar Pod is qualified for storage from -55 C to +85 C. Operating temperature qualification testing for the Block 1 configuration is scheduled for completion in Q1 2027.

Response to Item 3.7 — Reliability

Predicted MTBF from the Block 1 reliability model is 3,800 hours, with growth to 4,500 hours projected for Block 2.

About Boreal Systems

Boreal Systems is a privately held sensor integrator headquartered in Tromsø with production facilities in Ontario. The information contained herein is provided for planning purposes only. Nothing in this document shall be construed as a commitment by the Government to issue a solicitation or award a contract. The information contained herein is provided for planning purposes only. Nothing in this document shall be construed as a commitment by the Government to issue a solicitation or award a contract.

Note: Boreal's maturity assessment methodology differs from the TRL scale referenced in the RFI; a mapping can be provided upon request.
